Abstract:

The arsenic pollution is a serious problem in nine districts of West Bengal and it has affected a large population. The main purpose of this study was to examine the socio-economic consequences of arsenic pollution. Thus it has been examine in this study how social and economic life of the people Daspara is affected due to the arsenic pollution. I have made a field work over their occupational pattern and distributed them with respect to their economical condition. Most of them enjoy thier job as an agricultural labourer or a vanpuller. The people, presently pulling van was an actually agricultural labourer. But due to lack of advantage and bad condition in the field of agriculture they have changed their occupation.

Keywords: Socio-economic consequences of environmental pollution
